

PROTECTIONPRO[®]

BY MADICO

Protect Your Privacy & Your Screen

Need privacy when viewing your mobile device? ProtectionPro's new **Privacy Film** screen protection offers two-dimensional view obstruction. The screen appears dark when viewed from side angles but appears perfectly clear to the user. Text, email and send or receive pictures without having your communications public!

- Impact Resistant
- Thin and Touch Sensitive
- Premium Clarity and Matte Finish
- Reduces the Appearance of Fingerprints
- Protects Screen from Scratches
- Maintains Privacy from Side Views
- Self-healing to Minor Scratches and Abrasions

ProtectionPro Privacy film works by obstructing and distorting the way light passes through the film in order to provide some control over the view angle of your screen. We do not recommend using Privacy film on screens that have built-in capacitive or optical fingerprint sensors, as the functionality of this security feature will be compromised due to the physical properties of the film. For maximum compatibility with these more sensitive security features, we recommend using our optically clear Ultra2 protective film.

30° Angle Privacy
